Can my PhD supervisor be my mentor?	11
Could my PhD supervisor be a co-investigator?	11
Could my mentor also be a co-investigator?	11
Do I need to include a CV for my mentor?	11
Co-investigators and staff resources	11
I would like to apply for a New Investigator Grant as the principal investigator and have a co-investigator from another RO. Is this allowed?	11
Can I include research staff on the proposal?	11
Can I include a linked studentship in my proposal?	11
Where my research project includes employing a Research Assistant (RA), is funding available to support the RA's development and training?	11
Resubmissions	11
If my application is unsuccessful, can I reapply?	11
Joint Electronic Submission	12

I don't seem to be able to select myself as the principal investigator - does this mean that my mentor should be named as the principal investigator? 12

How I can set my account in Je-S? 12

I'm having trouble accessing or using the Je-S system. What shall I do? 12

I am not sure how to fill out a particular section of the Je-S proposal form. Can you help? 12

Assessment process 12

 What happens to my proposal once I have submitted it?..... 12

Introduction of New Investigator Grants

Why does ESRC support a New Investigator Grant scheme?

The consultation that informed the development of our 2015 Strategic Plan identified the lack of provision for early career researchers as a key issue. We subsequently undertook a review to consider evidence from a variety of sources to inform discussions about where ESRC support could add most value.

This review suggested that the period immediately post PhD and support for those seeking to become independent researcher were key transition points at which ESRC support could be the most effective. In light of that, we revisited our previous early career scheme, Future Research Leaders, and replaced it with two separate schemes – Postdoctoral Fellowships and New Investigator Grants.

The [postdoctoral fellowship](#) scheme is for doctoral graduates who are within one year of completing their PhD, to give them the opportunity to consolidate their PhD through developing publications, their networks, and their research and professional skills.

The core objectives of the New Investigator scheme is to provide the opportunity for early career researchers to get their first major element of research funding and experience of managing a research project and team. Applicants would need to have a mentor and would be required to include plans for their continuing professional development.

What do you mean by ‘independent researcher’?

Early career researchers may have participated in research projects as co-investigators or research staff but not had the opportunity to lead a research project in their own right. By referring to independent researchers we are referring to someone who has submitted their own proposal and taken on the role of principal investigator (PI). The PI takes the lead for both the intellectual leadership and conduct of the research as well as managing the project and team including observance of the terms and conditions.

Why are you changing the eligibility criteria?

Our review of early career researchers in 2016 showed that there was no clear definition of what constituted an early career researcher and that there was increasing diversity in career trajectories. We initially retained the time bound eligibility criteria from our previous early career grant scheme, Future Research Leaders, to support the transition between the two schemes but want to be more inclusive of different career pathways. Now the new investigator scheme is well established we are revising the criteria.

It is important to remember that this remains a scheme to support early career researchers and as such the onus is on applicants to demonstrate why they should be considered as such and peer reviewers will be directed to consider that justification when they assess applications.

When is the closing date?

There is no closing date; as with our Research Grants scheme proposals can be submitted at any time.

Eligibility

Which research organisations are eligible to apply?

All UK research organisations (ROs) eligible for Research Council funding. Please see <https://www.ukri.org/funding/how-to-apply/eligibility/> for more information.

My RO has an office overseas, can I be based there?

No, you must be based in the UK within reasonable travelling distance of your host RO except when on fieldwork or overseas visits.

For the purpose of this scheme, how are you defining ‘early career researcher’?

For the purposes of this scheme an early career researcher is someone who has yet to make the transition to being an independent researcher (see above definition of an independent researcher). In recognition of the increasing diversity of career trajectories, we are not providing a timebound definition of ‘early career researcher’ as our ambition is to be inclusive of people with different career paths and trajectories. As such, it is not possible to come up with a single definition that could apply to the scheme everyone therefore the onus is now on applicants to articulate why they should be considered an early career researcher. This justification will be considered as part of the peer review process.

Can you give me some examples?

Some researchers will embark on an active research career directly following their PhD but others won’t and, as such, could still be considered as being an early career researcher for a longer period of time. For example:

- Those who have spent periods of time outside of academia i.e. due to illness, parental leave, unemployment or employment outside of academia in non-research roles;
- Applicants who may have been employed in academia but in posts with limited or no scope for their own research such as teaching-only contracts;
- Applicants may have had prior experience in one discipline but are aiming to re-skill in a new area of research.

Are applicants who have been employed in a research post outside of academia eligible to apply?

All applicants must justify why they should be considered an early career researcher and this should reflect all of their prior research experience, whether within academia or not, and must demonstrate they that they have not led and managed major research projects in their role.

I would like to apply but I have been awarded funding from a non-UKRI body (eg Leverhulme, National Science Foundation). Does this mean I’m ineligible for a New Investigator Grant?

Funding received from outside of UKRI would not preclude you from applying to this scheme however, given the limited funding available we would not expect applicants who had already received funding through a scheme aimed at supporting their transition to being an independent researcher to apply. Applicants who have been awarded grants or fellowships from a non-UKRI source must address how a new investigator grant would differ from their previous funding in terms of supporting the career development.

Can the ESRC confirm my eligibility before I submit my proposal?

No. Applicants must provide a clear case as to why they should be considered an early career researcher as part of their application and this will be assessed as part of the peer review process. You may want to discuss how you articulate this with your institution's research office, your proposed mentor or your peers.

Do I need to have a PhD in order to apply?

Given the aim of the scheme in supporting applicants seeking to transition to being an independent researcher, we would normally expect applicants for this type of scheme to be postdoctoral. However applications can be submitted by those who do not have a PhD if they can demonstrate that they have prior experience of conducting research at postgraduate (and beyond) level and may hold a postgraduate qualification. For example, working at a non-governmental organisation, in government or the private sector.

Does academic research experience obtained prior to submitting my PhD affect my eligibility to the scheme?

This is a scheme for early career researchers, it is not anticipated that those who have had a significant level of research experience either before or after a PhD would apply unless they can demonstrate that their prior experience did not allow for independent research. For example, they might have held teaching-only posts.

Can I apply if I'm studying for, but haven't submitted, my PhD?

Yes; however, you need to consider whether you would be able to demonstrate your transition to being an independent researcher responsible for the leadership and management of a research grant. If not, you may want to consider seeking funding for postdoctoral support first.

We have introduced a new [postdoctoral fellowships](#) scheme which is being administered through our network of Doctoral Training Partnerships (DTPs) and Centres for Doctoral Training (CDTs) for doctoral graduates who are within one year of completing their PhD to give them the opportunity to consolidate their PhD through developing publications, their networks, and their research and professional skills.

I know the call is open to researchers who have not previously been principal investigators on UKRI grants, but is an individual who has been named as a co-investigator on a previous grant still eligible to apply?

Yes, previous co-investigators are eligible to apply as we see a clear distinction between the role of a PI and Co-I in terms of the intellectual leadership and management of the research.

I have been allocated funding through my institution's ESRC Impact Acceleration Account (IAA) – does that count as being a PI on a research council grant?

No, being allocated funds via an IAA would not constitute being the PI on a research council grant.

Can my application include an international co-investigator?

Yes. International co-investigators can be included, please see our policy on this for further information: <https://esrc.ukri.org/funding/guidance-for-applicants/inclusion-of-international-co-investigators-on-proposals/>

Can I apply for a New Investigator Grant if I have gained a professorship?

No, the scheme is aimed at researchers who are transitioning to being an independent researcher. We would expect anyone who had gained a professorship to have already made that transition.

What if I submit my proposal but am subsequently promoted to a professorial post before my grant starts?

If you gain a professorship before the award starts then you are no longer eligible for this scheme but if your promotion occurs after the grant has started (and was not known about at the grant start date) the grant can continue provided the requirements of your new post are compatible with the programme of work.

Is the competition open to non-British nationals?

It's open to all nationalities, but to apply the applicant must have the support of a UK research organisation where they will be based for the duration of the grant.

Do I need to have a permanent post in order to apply?

No, as long as your research organisation is willing to provide the necessary support for your proposal and the portion of your salary not covered by the ESRC contribution for the duration of the grant. Please refer to the ESRC Research Funding Guide (<https://esrc.ukri.org/funding/guidance-for-applicants/research-funding-guide/>) for further information on eligibility of applicants.

Am I eligible to apply to ESRC if a proposal based around the same research stream is under review with a different funding organisation?

Yes, you can apply to different funding bodies outside of UKRI with the same project but not be funded for the same project from two different funders. If you were successful with both you would have to decide which one of the two to accept.

Can I apply for a New Investigator Grant if I've had funding for an RC Studentship?

Yes.

Can I apply to another ESRC call at the same time as applying for a New Investigator Grant?

Yes, as long as the two proposals are different in scope and content, as we do not allow the same proposal to be submitted to more than one scheme. We would expect the applications to be significantly different in terms of aims and objectives and/or methodological/analytical approach to a research question.

If you submit both proposals at the same time, and are successful with both, you would have to choose which grant you wanted to hold. If not, you would have to accept the first grants that is offered.

Can I apply for a UKRI Future Leaders Fellowship at the same time as applying for a New Investigator Grant?

Yes if, as above, they are two different applications.

The guidance states that the ESRC expects to see a limited number of proposals from a single research organisation – is there actually a limit?

No but research organisations should adhere to the ESRC policy on demand management as we will be looking closely at both the volume and quality of proposals ROs submit. For further information please see <https://esrc.ukri.org/about-us/performance-information/demand-management/>

Nature of proposals

How can I check if my proposal is suitable for ESRC funding?

If you are unsure, please complete the remit query form available on our website: <https://esrc.ukri.org/funding/guidance-for-applicants/is-my-research-suitable-for-esrc-funding/>. Your enquiry will be passed to the Remit Team, who will contact you directly. We strongly advise you to contact us prior to submission if your work encompasses the remit of more than one Research Council.

Activities and funding

Is the New Investigator Grant primarily an opportunity to lead a research project, an early career training scheme, or a chance to build up my network of contacts?

It is a combination of the intellectual leadership of a research project and the grant holder's continuing professional development.

What if I'm only interested in the research project and not undertaking further skill development at this time?

All applicants who apply for a new investigator grant must include a skill development plan as part of their application. The programme of activities should be tailored to support their transition to being an independent researcher. Proposals submitted to the New Investigators call that don't include a programme of skills development will not be accepted for processing.

Can my research activities follow on directly from my PhD?

We expect that in the process of completing your PhD you may have identified new, but related, avenues for further enquiry, so your New Investigator Grant proposal may be related to your PhD. However, you will need to demonstrate very clearly within your proposal how you will make the transition to being an independent researcher.

Can I apply to this call to undertake a secondary data analysis project?

Yes, you can as long as your proposed programme of work also addresses the developmental aspect of New Investigator Scheme. If not, you should consider applying to the Secondary Data Analysis Initiative (SDAI).

Is there a minimum length of time for the grant?

No, there's no minimum length but it must be sufficient to support the transition to independent researcher.

Is there a minimum time commitment for the principal investigator?

No, although reviewers will be looking to be assured that the proposal is compatible with the aims of the scheme in terms of leading and managing the grant and the associated skill development activities.

Is there a maximum time commitment that can be claimed from the grant?

It's down to the applicant(s) to determine the configuration and time commitment of the team based on the project being proposed. As such there's no limit on the proportion of time they can request but it must be clearly justified in relation to the project and the aims of the scheme in supporting the transition to being an independent researcher.

I note that the scheme aims to support the principal investigator to manage a research project and team, what if I am unable to cost both my time and that of a research assistant within the scheme limit?

The configuration of the research team should be informed by project being proposed. Whilst there is no limit on the time commitment of the principal investigator it is important to remember that this is a grant, rather than a fellowship, and you need to consider whether what is being proposed is in line with the overarching aims of the scheme. If you are struggling to configure the team within the overall limit of the scheme you should consider both your own time commitment along with the proposed scope and duration of project or whether a different call might be more suitable for what you are planning to do.

If I am not planning to employ staff on the grant, can I use my experience in supervising students to demonstrate experience of managing people?

No, we do not see supervising students as being equivalent to managing a team.

We also recognise that applicants may have had prior experience of managing teams so if you are not proposing to employ research staff you need to consider what evidence you can provide of management experience to reassure assessors that by the end of the award you would be in a position to manage major projects and teams of researchers

Will the ESRC be able to advise on costings?

No, you should contact your research organisation's finance office for advice.

When applying for the funding, will the staff element for the investigator be categorised Directly Incurred or Directly Allocated?

The principal investigator's time should be added under directly allocated costs if they are working directly on a project but their time charged to the grant will be based on estimates rather than actual costs. Where costs are actual, auditable and verifiable, they should be included under the Directly Incurred heading.

Can I include a consultant on the project?

Yes, as long as it is within the overall limit for the call and their role and contribution to the project is clearly justified.

If successful, will my grant be funded at the level I've applied for?

No, not necessarily. In assessing your proposal reviewers will need to be assured that it offers good value for money and that the requested costs are appropriate for the proposed programme of activities. Costs will be checked to ensure that they are eligible under our research funding rules and that they have been clearly and adequately justified. Costs that are ineligible or unjustified will be removed from the amount awarded.

When you say that costs should be justified, what do you mean?

We need to be clear about how you've arrived at the costs you're requesting and why they are necessary for the successful completion of the project. This should be detailed in the justification of resources attachment.

Mentors

Why must I have a mentor?

As an early career researcher, your learning stands to be enhanced by drawing on the expertise and contacts of an academic mentor who will be internationally acknowledged as an expert in your field of enquiry. You can turn to your mentor regularly for advice on aspects of your research project, for an introduction to other academic experts and senior practitioners or policymakers in your mentor's network, and for advice on your research and knowledge exchange skills training and development programme.

What is expected of a mentor?

The role of the mentor is to supervise and support the work of the PI (both scientific and non-scientific), answer any queries and help with any problems that may arise during your research. They will not be directly involved in running the project, their role is advisory. It is expected that regular contact will be maintained between the PI and mentor, and that the mentor will review progress against agreed milestones (including the implementation of the training and development programme).

How much time will mentoring take?

We anticipate mentoring time will be around one to three hours per week, but the exact commitment will depend on the understanding between mentor and grant holder and should be confirmed within the mentor's statement.

Can mentors be costed into the proposal?

No.

Should my mentor be from the same research organisation as me?

Yes. Ideally applicants should have a single mentor based at the same research organisation as the PI. If it is not possible to find a mentor with all the suitable knowledge within the PI's organisation a second mentor may be appointed for this purpose from another organisation.

Can I have more than one mentor?

Yes, this is particularly encouraged for proposals that are on the borderline between social sciences and other disciplinary areas or where an extended period at an overseas RO is planned. The need for more than one mentor should be clearly articulated in the proposal.

Can my PhD supervisor be my mentor?

The purpose of the New Investigator Grant is to support the transition to being an independent researcher. As such we would encourage applicants to consider how they might link to, and be influenced and challenged by, a wider network of academics working in the area, and therefore how the grant would be a step forward from their PhD. Therefore we would not normally expect the mentor to be your principal supervisor, although we do recognise that this is not always practical. Ultimately it's down to you to justify your choice, but you must be able to demonstrate that the grant will have a demonstrable impact on your career trajectory.

Could my PhD supervisor be a co-investigator?

There's nothing to preclude your PhD supervisor from being a co-investigator but you'd need to think about how this would fit with the aim of the scheme in terms of your transition to becoming an independent researcher.

Could my mentor also be a co-investigator?

No, we would consider the two roles to be distinct.

Do I need to include a CV for my mentor?

Yes, a CV will be required for each mentor.

Co-investigators and staff resources**I would like to apply for a New Investigator Grant as the principal investigator and have a co-investigator from another RO. Is this allowed?**

Yes; you should explain the role and contribution of all team members within the proposal.

Can I include research staff on the proposal?

Yes. All costs, including staff ones, must be clearly and adequately justified in the proposal.

Can I include a linked studentship in my proposal?

No, studentships cannot be included in this call.

Where my research project includes employing a Research Assistant (RA), is funding available to support the RA's development and training?

Yes, your responsibility as PI extends to supporting their development as a researcher. You need to identify whether the RA has any learning needs related to fulfilling their project duties effectively, and to arrange appropriate opportunities to meet those learning needs.

Resubmissions**If my application is unsuccessful, can I reapply?**

We have an invited resubmission-only policy so you cannot resubmit an amended proposal. You can submit a new proposal with a significant change of focus with fresh or significantly modified objectives and/or an entirely revised methodological/analytical approach to a research question. Please see our website for further information:

<https://esrc.ukri.org/funding/guidance-for-applicants/resubmissions-policy/> and the guidance

on what constitutes a new proposal: <https://esrc.ukri.org/funding/guidance-for-applicants/resubmissions-policy/what-constitutes-a-new-proposal/>

Joint Electronic Submission

I don't seem to be able to select myself as the principal investigator - does this mean that my mentor should be named as the principal investigator?

No, the applicant (ie the new investigator) is the principal investigator, not the mentor. You need to check that you have the correct Je-S account type for this call, ie a Je-S registered account that is verified by the research organisation.

How I can set my account in Je-S?

The New Investigator Grant requires a Je-S registered account. For further information on how to set up your account please contact:

- Je-S Helpdesk
Email: JeSHelp@je-s.ukri.org
Telephone: 01793 444164

If you experience difficulties using Je-S or have questions regarding its use, Helpdesk staff can be contacted Monday to Friday 9.00 to 17.00 (excluding public and other holidays).

I'm having trouble accessing or using the Je-S system. What shall I do?

You can find guidance at the Je-S website (<https://je-s.rcuk.ac.uk/jes2webloginsite/login.aspx>) or you can contact the Je-S Helpdesk.

I am not sure how to fill out a particular section of the Je-S proposal form. Can you help?

Please refer to the 'Je-S Guidance Notes for Applicants' document on the ESRC new investigator grants webpage (<https://esrc.ukri.org/funding/funding-opportunities/new-investigator-grants/>).

Assessment process

What happens to my proposal once I have submitted it?

Your proposal will be processed alongside applications to our Research Grants open call, therefore you should refer to the Research Grants frequently asked questions for further information on the process: <https://esrc.ukri.org/funding/funding-opportunities/research-grants/>.
